

SpeiZi®

Complementary feed for new-weaned piglets supporting a good intestinal environment

SpeiZi is an alternative of high dosage of zinc oxide to use around weaning, and can replace 50-100 % of veterinary prescribed zinc oxide the first 14 days post weaning. SpeiZi contains seaweed meal, selected fruit parts, herbs and plant extracts.

These ingredients support beneficial bacteria defeating harmful bacteria in the gut and generating balance between harmful radicals and beneficial antioxidants, which are important factors in the period right after weaning.

SpeiZi contains:

- Seaweed meal supports a beneficial gut flora
- Selected parts from fruits, fenugreek and plant extracts with high content of antioxidants strengthen the immune system post weaning
- Clostridium butyricum – gram positive bacteria performing probiotic effect in the intestines.

Benefits and effect:

- Reduces presence of harmful bacteria
- Supports growth post weaning
- Reduces use of veterinary prescribed zinc oxide at weaning
- Eases the transition from weaner feed to starter feed

Packaging:

- 15 kg bags
- 66 bags per pallet

Application:

Use SpeiZi as a replacement for high inclusion of zinc oxide with 2.5 kg per ton feed when used as a full replacement. Upstart proposal: Replace 50 % of the prescribed zinc oxide with 50 % SpeiZi in the period around weaning. With a successful 50 % replacement, it can additionally be tried to replace the remaining prescribed zinc oxide with SpeiZi.

Consumption:

15 kg SpeiZi is enough for approx. 6 tons of complete feed
