

CalciumBalance – Now with Selenium

R2 Agro A/S – NutriScan has further developed our efficient CalciumBalance Drench with added selenium. CalciumBalance is a combination of calcium propionate, calcium chloride, magnesium and selenium in a propylene glycole emulsion, which is rapidly absorbed in the cow's blood to effectively prevent milk fever. CalciumBalance is used prior to and after calving. The optimal selenium supply reduces the risk of retained placenta. The glucose forming energy in CalciumBalance helps prevent ketosis.

AlfaVita – Natural vitamin E – Now with Selenium

AlfaVita is a liquid water-soluble resolution and it is suitable for using directly in the drinking water or blended into the feed. AlfaVita has added selenium which interacts with vitamin E and gives both the selenium and the vitamin an increased effect. Young stock has a higher utilization of natural vitamin E compared to synthetic vitamin E.

News from the export market:

By Nils Pedersen, Export Manager in R2 Agro–NutriScan

"R2 Agro – NutriScan has increased the activities in the export market where we currently are exporting to more than 22 countries. As we wish to expand our market activities further we are in search of new distributors in England, Ireland, Holland and Germany to distribute our product portfolio of diatetic nutritional supplements. It is primarily nutritional supplements, which prevents ketosis, diarrhoea, dehydration, hypocalcemia and hypophosphatemia (downer cows syndrome)".

If you are interested in distributing our product range and you already are established in or have acces to above mentioned markets please do not hesitate to contact Nils by email njp@r2agro.com or phone +45 76752101.
